PROFILE

A professional software engineer, release engineer and build manager. Experienced with using a wide range of technologies and practices, including multiple dynamic programming languages, version control tools, build and continuous integration tools and unit testing frameworks. Over 10 years background in UNIX, Linux and open source technologies.

EXPERIENCE

IT labs automation engineer at IBM-XIV from January 2011

Development and maintenance for web based tools and services, mostly written in Django. Automation, monitoring and management for a large data center and multiple users.

Configuration manager at IBM-XIV from April 2009 until January 2011

Education, support and administration for Atlassian Jira, Confluence, and a central git server.

Configuration manager at ECI Telecom from November 2007 until April 2009

Improving java and windows build processes. Introduction of Jira, Perforce and continuous integration for process improvement. Administration of said services and Solaris OS.

Configuration manager at RSA Security from April 2007 until November 2007

Administration of Perforce version control and a continuous integration server. Refactoring the build, packaging and patch system to cut installations from hours to minutes.

IPTV integration engineer at BigBand Networks from January 2006 until April 2007

Linux administration, tuning and troubleshooting. Building a Linux based platform for a custom IPTV product with Real-Time Linux distributions and specialized hardware.
